

## **The Benefits of Concrete Floors**

There are several reasons why concrete makes up so much of our built-up environment. It's affordable, easy to maintain, durable and if maintained properly, will last a lifetime. Concrete can handle repeated exposure to high foot or vehicular traffic, heavy equipment and elements or contaminants. However, years of continuous abuse can lead to it breaking down.

### **Densified Concrete Flooring: Dust-Proof, Easy to Clean & Incredibly Durable**

Our Technical Site Service team, work within agreed protocols, to allow us to guarantee that concrete treated with the Deckmaster Formula will stay cleaner for longer whilst providing an easy clean surface. Furthermore, it'll handle wear and tear better, reducing your ongoing maintenance and after-care costs, and if burnished or polished will reflect more light around the working environment, potentially reducing your energy costs.

These key benefits add up to create a low maintenance, cost-effective investment that will keep up with the demands of your facility.

### **The Benefits, in Context**

A little more context on the benefits of the Deckmaster Formula and our concrete Densification process.

#### **Key Benefits**

- Cost-effective and sustainable
- Quick application with minimal disruption
- Chip, flake, and abrasion resistant
- Low ongoing maintenance and after-care costs
- Light reflective, if burnished or polished
- Environmentally friendly and solvent free
- Practical and durable

### **An Environmentally Friendly Concrete Densification System...**

We begin by removing any contamination that's inherent in the concrete's surface. Next, we apply the Deckmaster Formula, which can be followed by a burnishing or polishing. The Deckmaster Formula penetrates deep into the concrete to densify, harden it. The result is a strong and abrasion-resistant concrete floor.

#### **Improved Durability**

A concrete floor with the Deckmaster Formula applied has an impressively long lifespan (we offer a twenty-year guarantee) and requires little ongoing maintenance.

The Deckmaster Formula is certainly one of the most economic flooring investments you can make.

#### **Reduced Ongoing Maintenance Costs**

A Deckmaster Formula floor is extremely dense and hard-wearing. With just minimal ongoing maintenance, your floor will continue to look as good as the day it was installed.

## Initial Installation Cost

Whether it's an existing floor or a freshly placed concrete floor, the Deckmaster Formula doesn't use toxic chemicals which means the floor can be treated quickly and often whilst the space is in use. Crucially, a freshly treated floor can also be used almost immediately, assisting handover target dates on new build, or avoiding downtime and major disruption to an existing business.

## Cleanability

A floor treated with the Deckmaster Formula can be easily cleaned in line with the O&M Manual. Additionally, the floor comes with a twenty-year guarantee, creating a healthier, cleaner working environment.

## Next Steps

We can inspect existing facilities, or support with technical specifications on new build projects across the UK and Europe. We provide concrete flooring solutions to a wide manner of commercial and industrial customers throughout the UK.

Refurbishing an existing facility, especially during ongoing operations, is a considerable investment and concern for many facilities managers and business owners. You want to be certain that the people you choose to carry out the work have an established pedigree and can be trusted to get things done on time, within budget and without any issues. We're here to fully explain the process and make every step simple.
